

SharePoint 2007 for Existing SharePoint users

There is a wealth of new features built into Microsoft Office SharePoint Server 2007 which -to be frank- even we found to be quite overwhelming when we first started looking at the latest version. With some of the new features being made available, we believe that Windows SharePoint services 2003 users will be looking very closely to upgrade to the latest version quickly because it will help these organization improve communications. Whether it be Web Content Management, Workflow or Business Intelligence, Microsoft Office SharePoint Server 2007 helps people get more done by providing a platform for sharing and working together in teams, communities and people driven processes.

How We Help

By becoming immensely knowledgeable on how SharePoint can positively affect a company's business, Cognite has a great understanding how to help companies get the most out of their systems.

We have a clear understanding of what is necessary for companies to maximize their SharePoint investment. Our consultants have developed a track record of delivering SharePoint 2007 implementations. We work with our customers to understand how they can best get superior business value out of the system.

We help our clients understand how the Enterprise Content Management (ECM) in the new system helps them manage the huge volume of unstructured content that includes documents, e-mail messages, videos, instant messages, Web pages and more that has vastly accumulated in recent years. This content often exists in a state of unmanaged chaos that prevents an organization from properly using these valuable assets for better knowledge sharing, improved customer communications, and increased process efficiency. Built on a well-integrated platform, ECM from Microsoft easily extends content management to every information worker in an organization through integration with familiar tools like the Microsoft Office system.

Microsoft Office SharePoint Server 2007 provides built-in workflow templates to automate approval, review, and archiving processes. With Office SharePoint Server 2007, users can also create, maintain, and analyze custom workflows, enabling streamlining of collaborative processes. And Business Intelligence with Office SharePoint Server 2007 makes it easy for decision-makers to access and analyze information anytime, anywhere. We work closely with our clients to ensure that the most efficient solution for their requirements is envisioned, architected, developed, launched, and optimized.
