

# SharePoint 2007 Templates

With Windows SharePoint Services 3.0, Microsoft is releasing 40 new application templates. Each template provides some basic built-in functionality that showcases select SharePoint capabilities; The templates encourages its use in a collaborative workgroup environment; and gives customers' IT teams an opportunity to demonstrate how SharePoint can increase their organizations' efficiency.

The templates are designed to be installed easily, and can be customised if required to reflect your specific business requirements.

The ability to customise the templates provides significant business value to any organization (using SharePoint Designer, can mean that that you have the ability to carry out changes to the template without the need for extensive code changes (in effect you have capability to customise without code). By adopting a template for a specific business need, your organization can start using SharePoint faster and end up with a solution that better fits your business requirements.

The templates available are as follows:
